Professional Summary

Aspiring Full Stack Developer with a solid foundation in Java, along with working knowledge of Python and web development fundamentals. Experienced in using databases like MongoDB, MySQL, and PostgreSQL, with a strong interest in AI and ML. A fast learner with a proven ability to quickly grasp new technologies, demonstrated through active participation in multiple hackathons focused on building practical solutions. Currently a MumbaiHacks 2025 finalist, building an Agentic AI system (TAXBae) that autonomously manages user finances using LLM agents..

Education

Bachelor of Engineering (B.E) – Information Technology
M. H. Saboo Siddik *College of Engineering, Mumbai University*
CGPI: 7.44 | **Duration**: 2022 – Present (Expected 2026)

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript
Web Technologies: Fundamental Knowledge in React.js, Next.js, Node.js, Express.js, Tailwind CSS, REST APIs
Databases: MongoDB, MySQL,PostgreSQL
Cloud & Deployment: Netlify, Vercel, Render
Version Control: Git, GitHub
Other Tools: Postman, AWS , Figma

Projects

Automated Teller Machine | Banking Simulation System

- Developed a **Java**-based ATM simulation supporting core functionalities like balance inquiry, cash withdrawal, deposit, and PIN authentication.
- Implemented **error handling** for **invalid inputs, daily transaction limits, and insufficient balance scenarios** to mimic real-world banking operations.
- Focused on modular design and **DSA** concepts to ensure scalability and maintainability.
- **Tech Stack:** Java, OOP, Data Structures & Algorithms

Number Plate Recognition System | Computer Vision Project

- Built an **AI-powered** system for **real-time vehicle number plate detection** and recognition using **YOLO-based models**.
- Integrated two custom-trained models: one optimized for accurate detection and another for video streaming and plate reading.
- Designed the pipeline to **capture video frames, detect plates, extract text, and display results dynamically**.
- **Tech Stack:** Python, OpenCV, PyTorch, YOLO, OCR (Tesseract)

TAXBae (In Progress) | Agentic AI Personal Finance Assistant

Status: *Currently building (MumbaiHacks 2025 Finalist)*

- Developing an **agentic AI system** that autonomously tracks user expenses, identifies tax-saving opportunities, and creates investment plans.
- Implementing multi-agent workflows for **expense categorization**, **tax deduction planning**, and **portfolio suggestions**.

- Building an **AI finance chatbot** to explain money, taxes, and investments in simple, beginner-friendly language.
- Tech Stack: Next.js, React, Node.js, Neon Postgres, LLM API, OCR, Tailwind CSS.

Experience

Technical Operations Associate – Digital Examination Systems
Asquare Manpower Solutions | Duration: 1 Oct 2025 - 9 Mar 2026

- Managed deployment and configuration of **exam software across multiple systems**.
- Monitored **system performance and application stability** during live exams.
- Resolved **software and system-level issues** to ensure smooth operations.
- Supported **digital examination infrastructure** for large-scale testing environments.

Research and Development Intern
CareChain AI | Duration: 14 Dec 2024 - 31 Jan 2025

- Built **AI/ML Pipelines**
- Conducted experiments with **OCR, CV**, lightweight models
- Improved accuracy/tested prototypes
- **Technologies used**: Python, OpenCV, Tesseract, Git.

Web Developer (Freelance Project)
Jan 2024 – Feb 2024

- Designed and developed **personalized digital birthday cards** with interactive UI using **HTML, CSS, and JavaScript**.
- Implemented dynamic animations, custom messages, and responsive layouts to enhance user engagement.
- Delivered tailored card designs for clients, improving the digital gifting experience.
- **Tech Stack:** HTML, CSS, JavaScript.

Hackathons & Certifications

MumbaiHacks 2025 – Finalist (Agentic AI Theme)

- Built TaxBae, a multi-agent personal finance system.
- Engineered coordinated financial AI agents for expense categorization, deduction planning, and risk-based investment allocation

MegaHack - Season 5

- Built a Learning management system that can generate study resources by taking input a single word
- Used Google Gemini's API to review written code in the editor provided in the application
- Technologies used : React,js, Node.js, Express.js, MongoDB, Restful API

AWS Academy Graduate - AWS Academy Machine Learning Foundations

Telusko - Java Springboot and Microservices

LetsUpgrade - Postman API

SimpliLearn - GIT & GITHUB

SimpliLearn - Continous Integration & Continous Development
